

Re. : Amendment and Response to Office Action Mailed September 28, 2005
Appl. No. : 10/692,141
Filed : October 23, 2003

II. AMENDMENTS TO THE CLAIMS:

The following listing of the claims replaces all prior versions and listing of the claims in the application:

Please cancel Claims 1-17.

Please add the following new Claims:

18. (New) A table comprising:

a table top constructed from blow-molded plastic, the table top including a first side, a second side, a first end, a second end, ;

a first leg assembly connected proximate the first end of the table top, the first leg assembly movable between an extended position and a collapsed position relative to the table top;

a second leg assembly connected proximate the second end of the table top, the second leg assembly movable between an extended position and a collapsed position relative to the table top;

a support assembly disposed between the first leg assembly and the second leg assembly, the support assembly disposed between the first side and the second side of the table top, the support assembly comprising:

a first support member constructed from metal and connected to the lower surface of the table top, the first support member being disposed generally parallel to the first side of the table top;

Re. : Amendment and Response to Office Action Mailed September 28, 2005
Appl. No. : 10/692,141
Filed : October 23, 2003

a second support member disposed generally parallel to the second side of the table top, the first support member being disposed generally parallel to the second support member;

a first crossbar connected to the first support member and the second support member, the first cross bar being disposed generally parallel to the first end of the table top; and

a second cross bar connected to the first support member and the second support member, the second cross bar being disposed generally parallel to the second end of the table top, the first cross bar being disposed generally parallel to the second cross bar; and

a handle connected to the first crossbar and the second cross bar, the handle being disposed generally parallel to the first side and the second side of the table top.

19. (New) The table as in Claim 18, wherein the support assembly further comprises a first mounting structure integrally formed in the table top, the first mounting structure having a generally C-shaped configuration with a first end and a second end, the first support member being connected to the first mounting structure between the first end and the second end; and

wherein the support assembly further comprises a second mounting structure integrally formed in the table top, the second mounting structure having a generally C-

Appl. No. : 10/692,141
Filed : October 23, 2003

shaped configuration with a first end and a second end, the second support member being connected to the second mounting structure between the first end and the second end.

20. (New) The table as in Claim 19, wherein the first generally C-shaped mounting structure faces the second generally C-shaped mounting structure.

21. (New) The table as in Claim 19, wherein the first end of the first mounting structure is generally aligned with and spaced apart from the first end of the second mounting structure; and

wherein the second end of the first mounting structure is generally aligned with and spaced apart from the second end of the second mounting structure.

22. (New) The table as in Claim 18, further comprising a frame connected to the table top, the frame including a first side rail disposed proximate the first side of the table top and a second side rail disposed proximate the second side of the table top, the support assembly being spaced apart from the first side rail and the second side rail of the frame.

23. (New) The table as in Claim 18, further comprising a first support brace connected to the first leg assembly and the first cross bar of the support assembly, and a second support brace connected to the second leg assembly and the second cross bar of the support assembly.

Re. : Amendment and Response to Office Action Mailed September 28, 2005
Appl. No. : 10/692,141
Filed : October 23, 2003

24. (New) The table as in Claim 23, wherein the handle is spaced apart from and offset from the first support brace and the second support brace.

25. (New) The table as in Claim 18, wherein the first support member includes a first aperture that is sized and configured to receive a first end of the first crossbar and a second aperture that is sized and configured to receive a first end of the second crossbar; and

wherein the second support member includes a first aperture that is sized and configured to receive a second end of the first crossbar and a second aperture that is sized and configured to receive a second end of the second crossbar.

26. (New) The table as in Claim 18, wherein the first support member has a generally L-shaped configuration and the second support member has a generally L-shaped configuration.

Re. : Amendment and Response to Office Action Mailed September 28, 2005
Appl. No. : 10/692,141
Filed : October 23, 2003

27. (New) A table comprising:

a table top constructed from blow-molded plastic, the table top including a first side, a second side, a first end, a second end, an upper portion, a lower portion and a hollow interior portion formed during the blow-molding process;

a first leg assembly connected proximate the first end of the table top, the first leg assembly movable between an extended position and a collapsed position relative to the table top;

a second leg assembly connected proximate the second end of the table top, the second leg assembly movable between an extended position and a collapsed position relative to the table top;

a support assembly disposed between the first leg assembly and the second leg assembly, the support assembly disposed between the first side and the second side of the table top, the support assembly comprising:

a first mounting structure integrally formed in the lower portion of the table top during the blow-molding process as part of a unitary structure, the first mounting member including an inner surface and an outer surface;

a first support member connected to the inner surface of the first mounting structure, the first support member being disposed generally parallel to the first side of the table top;

a second mounting structure integrally formed in the lower portion of the table top during the blow-molding process as part of a unitary

Appl. No. : 10/692,141
Filed : October 23, 2003

structure, the second mounting member including an inner surface and an outer surface;

a second support member connected to the inner surface of the second mounting structure, the second support member being disposed generally parallel to the second side of the table top, the first support member being disposed generally parallel to the second support member; and

a crossbar connected to the first support member and the second support member, the cross bar being disposed generally parallel to the first end and the second end of the table top; and

a recessed portion integrally formed in the outer surface of the first mounting structure during the blow-molding process as part of a unitary structure, the recessed portion being sized and configured to form at least a portion of a handle.

28. (New) The table as in Claim 27, further comprising a second cross bar connected to the first support member and the second support member, the second cross bar being disposed generally parallel to the second end of the table top, the first cross bar being disposed generally parallel to the second cross bar.

Re. : Amendment and Response to Office Action Mailed September 28, 2005
Appl. No. : 10/692,141
Filed : October 23, 2003

29. (New) The table as in Claim 27, wherein the first mounting structure has a generally C-shaped configuration with a first end, a second end and an elongated body;

wherein the second mounting structure has a generally C-shaped configuration with a first end, a second end and an elongated body; and

wherein the first mounting structure is spaced apart from and faces the second mounting structure.

30. (New) The table as in Claim 29, wherein the first end of the first mounting structure is generally aligned with and spaced apart from the first end of the second mounting structure; and

wherein the second end of the first mounting structure is generally aligned with and spaced apart from the second end of the second mounting structure.

31. (New) The table as in Claim 27, further comprising a recessed portion integrally formed in the lower portion of the table top during the blow-molding process as part of a unitary structure, the recessed portion in the lower portion of the table top being sized and configured to form at least a portion of the handle.

32. (New) A table comprising:

a table top constructed from blow-molded plastic, the table top including a first side, a second side, a first end, a second end, an upper portion, a lower portion and a hollow interior portion formed during the blow-molding process;

a first leg assembly connected proximate the first end of the table top, the first leg assembly movable between an extended position and a collapsed position relative to the table top;

a second leg assembly connected proximate the second end of the table top, the second leg assembly movable between an extended position and a collapsed position relative to the table top;

a support assembly disposed between the first leg assembly and the second leg assembly, the support assembly disposed between the first side and the second side of the table top, the support assembly comprising:

a first mounting structure integrally formed in the lower portion of the table top during the blow-molding process as part of a unitary structure, the first mounting member including an inner surface and an outer surface;

a first support member connected to the inner surface of the first mounting structure, the first support member being disposed generally parallel to the first side of the table top;

a second mounting structure integrally formed in the lower portion of the table top during the blow-molding process as part of a unitary

structure, the second mounting member including an inner surface and an outer surface;

a second support member connected to the inner surface of the second mounting structure, the second support member being disposed generally parallel to the second side of the table top, the first support member being disposed generally parallel to the second support member; and

a crossbar connected to the first support member and the second support member, the cross bar being disposed generally parallel to the first end and the second end of the table top; and

a recessed portion integrally formed in the lower surface of the table top during the blow-molding process as part of a unitary structure, the recessed portion being disposed proximate the first mounting structure, the recessed portion being sized and configured to form at least a portion of a handle.

33. (New) The table as in Claim 32, further comprising a second cross bar connected to the first support member and the second support member, the second cross bar being disposed generally parallel to the second end of the table top, the first cross bar being disposed generally parallel to the second cross bar.

Re. : Amendment and Response to Office Action Mailed September 28, 2005
Appl. No. : 10/692,141
Filed : October 23, 2003

34. (New) The table as in Claim 32, wherein the first mounting structure has a generally C-shaped configuration with a first end, a second end and an elongated body;

wherein the second mounting structure has a generally C-shaped configuration with a first end, a second end and an elongated body; and

wherein the first mounting structure is spaced apart from and faces the second mounting structure.

35. (New) The table as in Claim 32, wherein the first end of the first mounting structure is generally aligned with and spaced apart from the first end of the second mounting structure; and

wherein the second end of the first mounting structure is generally aligned with and spaced apart from the second end of the second mounting structure.

36. (New) The table as in Claim 32, further comprising a recessed portion integrally formed in the outer surface of the first mounting structure during the blow-molding process as part of a structure, the recessed portion in the outer surface of the first mounting structure being sized and configured to form at least a portion of the handle.
